Chief, S/COM.

Photo Analysis Requirement.

1. Photography of 18 June 1955 covering the Foochow area of China reveals possible rhombic antennas just north of Foochow City. Detailed photo analysis of these antennas is necessary before telecommunication specialists can determine possible frequencies and distance of transmission. The questions requiring answers follow:

- a. What is the orientation of these structures?
- b. What are the heights of the various poles?
- c. What are the distances between poles?
- d. What other characteristics do these stations show?
- e. What degree of accuracy do answers to questions a-d above have?

2. This information is to be used by S/COM in preparation of a report to CSS and the NIC as well as a CSM.
